This new book explores some of the innovative strategies being deployed against cancer in Europe and how international collaboration has assisted in combating the cancer burden. It is a product of the European Partnership for Action Against Cancer (EPAAC) and it highlights some outstanding examples of how cooperation between national and international entities as well as policy-oriented innovation are contributing to the collective effort to control cancer. With a rising cancer burden in EU Member States over the last 30 years this is an important and timely call to arms.
