

We hit the spot: the new techniques that could bring interventional radiologists to the multidisciplinary table

Less invasive than surgery, less toxic than systemic therapies, interventional radiologists can deliver a growing variety of anti-cancer treatments isolated to local areas with a high degree of accuracy. This Cutting Edge article outlines some of the latest techniques and asks: is it time to invite them to pull up a chair around the multidisciplinary table?

What do you think?

- Could many patients now treated surgically do just as well, or better, using interventional radiology?
- Should these techniques be used more widely in multimodality therapy, and if so how?
